DETAILED ACTION

Specification Objections

The disclosure is objected to because of the following informalities: On page 9, line 3,

Page 2

"may be bent through up to 15 \(\Pi \)" is not understood. It appears that for proper basis for claim 4

that " \square " be changed to "degrees". Appropriate correction is required.

Claim Rejections -35 USC § 112

Claim 5 is rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for

failing to particularly point out and distinctly claim the subject matter which applicant regards as

the invention. In claim 5, "said selected angle" lacks proper antecedent basis, it appears that

claim 5 should depend from claim 3 which does call for a selected angle and for treatment on the

merits claim 5 will be considered to depend from claim 3.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form

the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior

to the date of application for patent in the United States.

Art Unit: 3679

Claims 1-15 are rejected under 35 U.S.C. § 102(b) as being anticipated by U.S. patent 5,749,609 to Steele. As to independent claims 1,14 and 15 The Steele device discloses in fig. 4 flexible piping 10 having first 11 and second 12 ends connected to a first pipe section 50 and a second pipe section 51, respectively. The flexible piping 10 includes a smooth bore (fig. 4, column 1, lines 15-20, column 4, lines 25-30 and column 4, lines 40-45) so that flow of all materials passes unimpeded. It is noted that the Steele device is not stated to be used as a connection for between a bath drain and a bath overflow however such recitation is considered to be merely a matter of intended use in which the introductory phrase or preamble of the claim does not state a limitation in the claim which distinguishes it over the prior art and further it has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. *Ex parte Masham*, 2 USPQ2d 1647 (1987).

As to claim 2, the two rigid flanking members can either be considered as the members 13a and 14a or the flange members 50 and 51 shown in fig. 4.

As to claims 3-5, the connector is inherently prevented from curvature above a selected angle based on many factors such as length of the flexible member, material of the flexible member, thickness of the flexible member, width of beads 16b or grooves 15a of which beads 16b will contact each other during bending and prevent further curvature. As shown in fig. 4 the connector bends within the range prescribed in claim 4 and clearly could be bent less or more such that members 50 and 51 interfere such as stated in claim 5 all depending on construction factors noted above all of which appear inherent in the fabrication of the flexible connector and as such do not patentably define over the prior art.

Application/Control Number: 10/785,581 Page 4

Art Unit: 3679

As to claims 6 and 13, see column 3, lines 35-45 which indicate the flexible member is made of elastomeric material.

As to claims 7-12 see the depressions, weak areas or predefined flexion locations 15a and beads or ridges 16b in fig. 1.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Note the flexible overflow pipe 8 of Japanese patent 55-11-60 and also pipe 8 of French patent 2626594. See also the flexible smooth bore drain pipes of U.S. patents 3,313,314 to Burke et al; 5,063,616 to Bresnahan and 4,516,278 to Lamond.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eric Nicholson whose telephone number is (703) 308-0829. The examiner can normally be reached on Tuesdays thru Fridays from 7:30 to 6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Daniel P. Stodola, can be reached on (703) 308-2686. The fax phone number for Technology Center 3600 is (703) 872-9306.
